

GANESH SUNKARI

+91 7416436142 — Hyderabad, India

sunkariganesh48@gmail.com — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

OBJECTIVE

Computer Science graduate with a solid foundation in Python, SQL, Machine Learning, and Data Analytics, supported by hands-on academic projects and AI evaluation experience. Passionate about developing efficient software solutions, analyzing data, and learning new technologies. Seeking an entry-level opportunity to contribute technical skills, collaborate with teams, and grow as a software professional.

EDUCATION

B.Tech in Computer Science and Engineering, Malla Reddy University 2021 - 2025
CGPA: 8.03 / 10

Intermediate (MPC), Narayana Junior College 2019 - 2021
Percentage: 96%

High School, Liberty High School 2019
CGPA: 9.7 / 10

SKILLS

Programming Languages	Python, SQL, HTML, CSS, JavaScript
Backend	Flask, REST APIs (Basics)
Data Analysis	Pandas, NumPy, Data Cleaning, Data Visualization
Machine Learning	Scikit-learn, Decision Trees, Random Forest, Model Evaluation
Tools	Power BI, Microsoft Excel, Git, GitHub, Jupyter Notebook, VS Code
AI	Prompt Engineering, AI Response Evaluation
Soft Skills	Problem Solving, Analytical Thinking, Communication, Team Collaboration

EXPERIENCE

Freelance – AI Response Evaluation & Prompt Engineering Aug 2025 - Mar 2026
DeccanAI

- Evaluated AI-generated responses for correctness, clarity, and alignment with expected outputs.
- Designed and refined prompts for reasoning, summarization, and classification tasks.
- Built evaluation frameworks to analyze model responses and detect inconsistencies.
- Provided structured feedback to improve model performance and user experience.

PROJECTS

Accident Injury Prediction — Decision Tree, Python, Streamlit: Developed a classification model using Python and Decision Tree algorithms to predict accident injury severity based on environmental and vehicle attributes. Built an interactive web application using Streamlit for visualization and real-time predictions.

Dynamic Drone Network Traffic Management — Gradient Descent Boosting, Python, Flask: Designed a machine learning system to detect anomalies in drone network communication using Random Forest, Gradient Boosting, and SVM models. Implemented predictive analytics to monitor drone activity and identify potential threats.

Marketing Analytics Dashboard — SQL, Power BI: Analyzed marketing campaign performance and built interactive dashboards to track engagement metrics and customer behavior.

Customer Behaviour Analysis Dashboard — Python, SQL, Power BI: Processed and analyzed retail transaction data to identify customer segments and trends. Created dashboards to visualize revenue, customer retention, and purchasing behavior. Ensured data accuracy and consistency through preprocessing and validation techniques

CERTIFICATIONS

- NPTEL – Python Programming
- NPTEL – Data Analytics with Python
- Cambridge English – B2 Level
- TCS iON Career Edge – Young Professional
- Deloitte Data Analytics Job Simulation – Forage
